TimeDateCalculator in short.

TimeDateCalculator calculates dates + times from time spans or time spans from dates + times.

Screen shots.

Start Date+Time (yyyymmddHHmm)

Figure 2 Portrait screen shot.

How it works.

As you can see from figure 1 and 2

- There is a "Start Date+Time" and an "End Date+Time".
- There are Time Spans between the "Start Date+Time" and "End Date+Time":
 - In the row/column with xxx **"Tot"** each box represents the total number of whole Years, Months, Weeks, Days, Hours **OR** Minutes between "Start Date+Time" and "End Date+Time".
 - In the row/column with **"+"** xxx the values in the boxes are added together to give the full time span between "Start Date+Time" and "End Date+Time".
- What TimeDateCalculator does is to "solve the equation" so the time spans equals "End Date+Time" – "Start Date+Time".
- "ddd" will show the three first letters of the name of the day corresponding to the Date+Time.

How to use it.

You can use it in two ways:

1. Enter the "Start Date+Time" and "End Date+Time" and press calculate:
 - i. Then the time spans will be calculated.
2. Enter either
 - a. the "Start Date+Time" plus a time span and press calculate:
 - i. Then the "End Date+Time" will be calculated

OR

- b. the "End Date+Time" plus a time span and press calculate:
 - i. Then the "Start Date+Time" will be calculated.

Have a good time!

Kind Regards
Eigil Krogh Sorensen
